

# RestcommONE Visual Designer

RestcommONE Visual Designer is an easy to use drag-and-drop builder that enables non-programmers to prototype or create telecommunication applications.

**See how we can help you succeed.**

## IVR

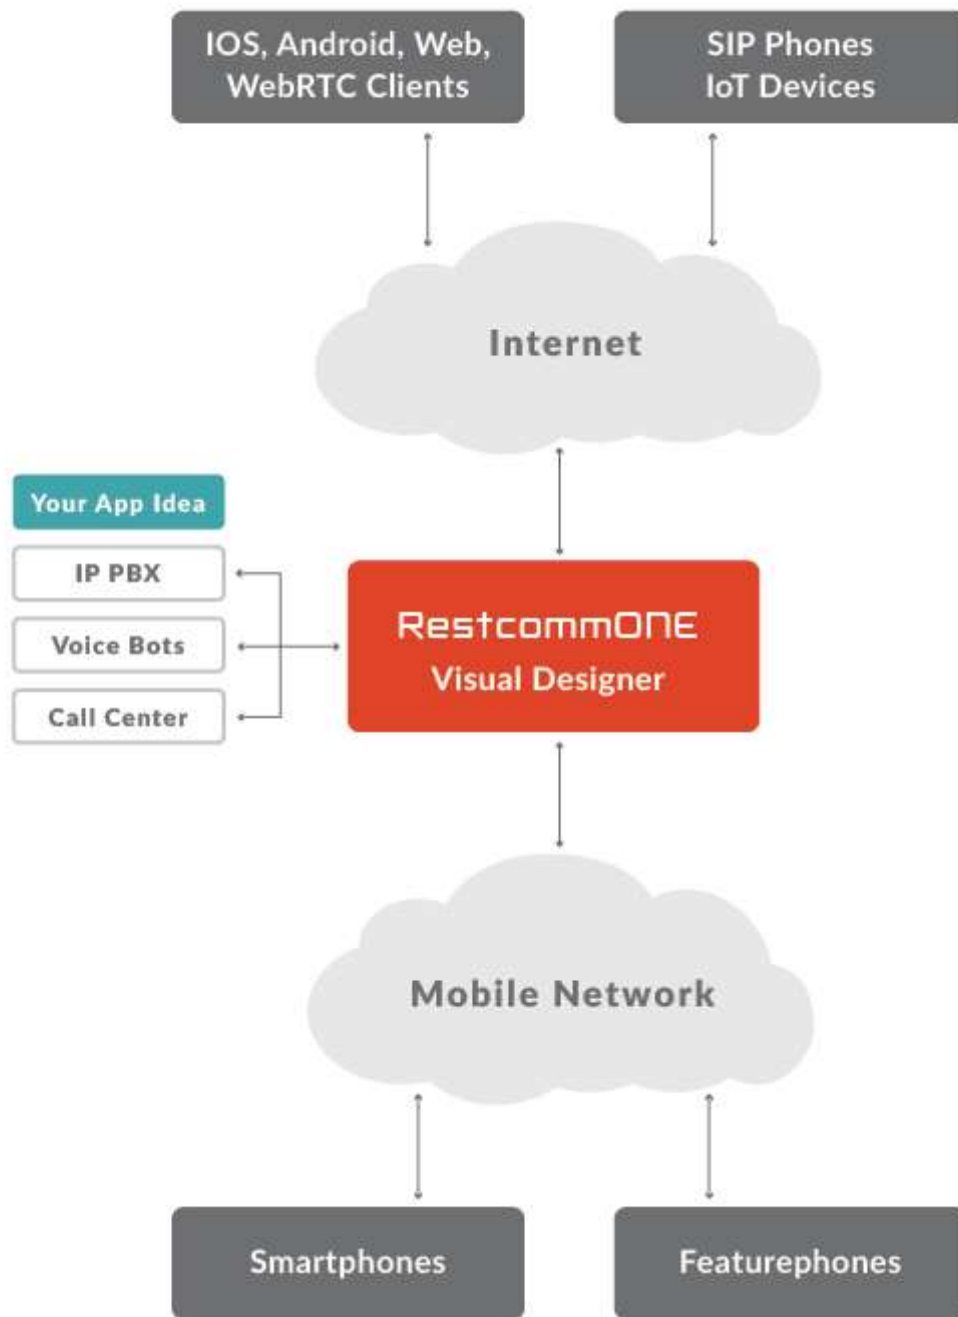

---

Build a responsive IVR without the hassle of writing code. Route your incoming calls to users, departments and mobile devices. Drag and drop from a palette of actions like Play, Dial, Collect, Say, SMS, Email and others support development of a wide range of applications.

## Integration with existing Apps & Services

---

Use Visual Designer to integrate and automate calls to a customer from a CRM like Salesforce.com, Zendesk or SugarCRM. Or retrieve customer information from a database and use PHP to send targeted A2P (Application-to-Person) marketing messages by SMS.

## Features

### Drag and Drop

---

Use drag and drop features to create call flows and apps with multiple components and technologies and services. Developers do not need to learn the complex telecom protocols and networking required for service.

## RestcommONE Markup Language (RCML)

---

Generate RCML that can be used as is or modified for use in other apps or services.

## Easy Integration With External Apps & Services

---

Enables Visual Designer apps to request and send commands and data to and from external apps and services. Visual Designer is able to utilize IP protocols including simple webhooks, APIs, and other commonly used methods.

## Full RestcommONE Telecom Stack Access

---

Enables developing lower level, native mobile content delivery and menu-driven applications. Utilize SMS as well as rich communications and content for over the top (OTT) apps and services to web, IOS and Android applications.

## Carrier-grade Scalability and Reliability

---

Carrier-grade scalability and reliability with load balancing and clustering support for automated failover creates a stable and scalable platform for apps and services built with Visual Designer. Unlike other more limited solutions, all RestcommONE services are load balanced, providing true carrier grade redundancy at scale.

## Flexible Operations and Monitoring Support via API

---

Easy to use web interface, complete CDR, logging and capabilities are also provided.
